

WORKSHEET 2

CUTTING OUT A NAME STICKER

We will now create a cut out vinyl sticker using the design you have just created

1. First save your design again, including the word "sticker" in the file name and ensuring format is Adobe Illustrator
2. Now select your name using the selection tool
3. In the right hand properties panel set "Fill" to none and "Stroke" to 0.1mm with the colour black
4. If you would like to you can change your font, or reposition your name
5. Click File>Save... to save your changes and then File>Save As... changing format to pdf

1.

2.

3.

4.

5.

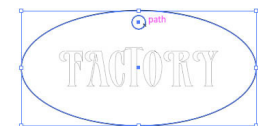

Now create a blank laser cut shape to mount your sticker on

6. Create a new document
7. In your original document, hold shift while clicking on the shape and circle to select them both
8. Copy, using Edit>Copy and then paste into your new document Edit>Paste
9. Save with a name including the word "blank" and save as a pdf

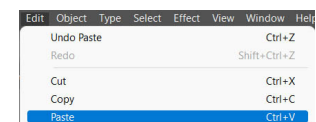

6.

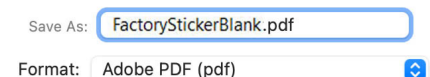

7.

8.

9.

If you have finished you can always create a different design to cut out of vinyl. Remember to create your shape and circle so you have something to mount it on

This cut out design could also be used on the laser cutter, however there are some factors to consider.

Some letter's have details within them, for example the A, R and O in FACTORY

If you tried to send this design to cut on the laser cutter these details will be lost as they are not attached to anything

You can use the font "Stencil" to avoid this issue
